***“If the foundations be destroyed, what can the righteous do?”***

*Psalm 11:3*

The Ark was not big enough to hold all of those animals!

It could not rain enough in 40 days to flood the Earth!

No wooden ship the size of the Ark could have survived the turbulent floodwaters!

The Genesis Flood account is a myth derived from Sumerian legends!

*“Knowing this first, that **there shall come in the last days scoffers**, walking after their own lusts,... For this they willingly are ignorant of, that by the word of God the heavens were of old, and the earth standing out of the water and in the water: Whereby **the world that then was, being overflowed with water, perished:**”*

Even more surprisingly, this deep rock was found to be saturated in water which filled the cracks. Because **free water should not be found at those depths**, scientists theorize that the water is comprised of hydrogen and oxygen atoms which were squeezed out of the surrounding rocks due to the incredible pressure. **The water was then prevented from rising to the surface because of the layer of impermeable rocks above it.**”*

The ground beneath our feet is only the topmost layer of a complex pattern of rock types and geological structures. By delving deep into its past, we can understand the history of a typical modern landscape.

# STRATA

**1. SLATE QUARRY.** The material for millions of roofs has been quarried from a layer of slate.

**2. VOLCANIC NECK.** The solidified lava in the neck of an ancient volcano stands up long after the cone has been eroded away.

**3. BASALT RIDGE.** Lava that once flowed at the bottom of a valley has outlasted the valley walls that shaped it.

**14. DIAMOND PIPE.** Volcanic pipes, stretching up from many miles underground, deliver diamonds to a minable depth.

**15. LIMESTONE RIDGE.** A block of limestone is pitted with holes, through which water sinks underground.

**16. LIMESTONE CAVES.** Water running through layers in the rock erodes caves and channels.

**17. CHALK DOWNLAND.** The soft, permeable beds of chalk have risen to rounded, well-drained hills.

**18. SANDSTONE RIDGE.** The massive buildup of desert sands has now been compacted into relatively hard sandstone.

**19. DEEP COAL MINE.** Where coal seams lie well below the surface, shafts are driven down to extract the mineral.

**20. STRIP COAL MINE.** Coal near or at the surface can most easily be mined in a series of strips.

**21. SALT DOME OIL TRAP.** Buoyant salt pushing up from below distorts the surroundings, trapping oil in reservoir rocks.

**22. ANTICLINE OIL TRAP.** A simple upfold in sedimentary layers provides a cap under which oil is trapped.
